Answer the following: If an acre of land is equal to 4046.86 m<sup>2</sup>, how many acres does the entire property cover (round your answer to the nearest acre)? 99 acres

$$800\text{m} \times 500\text{m} = 400000\text{m}^2 \div 4046.86 = 98.84\text{ acres}$$
