

Would you rather . . .

Earn a dollar for every foot in
1 mile OR earn a dollar for
every day you've been alive?

(These are imperial measurements but it's the math calculations that are key for this question.)

BONUS: How old do you have to be before it is more beneficial to take the money based on days alive?

This calculator could help you evaluate this challenge.

<http://www.beatcanvas.com/daysalive.asp>

Whichever answer you choose, justify your reasoning with mathematics - communicate your thinking.
